

Smart Fleet Management Powered by IoT

Real-time visibility. Lower operating costs.

Across industries (logistic, transportation, service fleets and heavy equipment), organisations are adopting IoT-powered fleet management to improve efficiency and safety.

How Maxis Enables Smarter Fleet Operations

Maxis provides scalable IoT connectivity for both OEM-integrated systems and aftermarket devices using Maxis IoT SIMs.

By connecting fleet assets to cloud platforms and dashboards, organisations gain:

Real-time fleet visibility	Track vehicle location and movement	
Predictive maintenance & remote diagnostics	Monitor vehicle health and detect issues early	
In-vehicle connectivity	Support mobile internet, telematics and digital tools for drivers & crews	
Seamless integration with enterprise platforms	Feed fleet data into ERP, logistics, and service systems for better decisions	

End-to-End Smart Fleet Management

Maxis delivers **connected IoT solutions** that help fleets operate smarter, safer, and more efficiently across industries.

Minimise Downtime & Boost Maintenance Efficiency

Continuous data from vehicles enables predictive maintenance and timely servicing.

Reduce breakdowns, minimise downtime, and extend vehicle lifespan.

Improve Compliance, Safety & Driver Performance

Monitor driver behaviour and road conditions in real time.

Reduce safety risks and improve compliance.

Gain Real-Time Visibility & Control

Track vehicle status, location, and performance securely.

Improve dispatching, responsiveness, and service levels.

Optimise Costs with Smarter Insights

Unify fleet data into a single dashboard.

Reduce fuel waste, prevent losses, and control operating costs.

CASE STUDY

Maxis Smart Fleet for a Malaysian Expressway Builder

Business Challenges

Manual vehicle maintenance scheduling

Limited visibility into fuel usage, location, and vehicle status

Delayed issue detection causing financial losses

No central visibility across large expressway maintenance fleets

How Maxis Drove Real Business Outcomes

Maxis **Smart Fleet** provided centralised, real-time visibility across the expressway maintenance fleet.

Predictive maintenance replaced manual scheduling with unplanned workshops reduced by 10-15%

Real-time fleet visibility reduced fuel waste and improved control by reducing idle at 20%

Proactive alerts/dispatch with response time reduced by ~30%

Consolidated single pane of glass and dashboard for all regions

Transform your fleet into a smarter, more efficient, and cost-effective operation with Maxis IoT solutions — driving real business impact today and future-proofing your operations for tomorrow.
